NORDAC
Electronic drive technology
E3000

Jutta Humbert and Ullrich Küchenmeister: “We produce the drive technology which the market demands: gear units, electric motors, and drive electronics.”

Since 1965, our family business has developed into one of the world's leading complete supplier of mechanical and electronic drive technology. We supply individual drive solutions. Our innovations set global standards.

Our focus is to provide you with added value.

Since 1965 we have developed and manufactured all the major components for our mechanical and electronic drive technologies (gear units, electric motors and drive electronics). This wide-ranging in-house design and production capability allows us to offer our customers individual drive solutions. Our extensive manufacturing, test and research facilities feature cutting-edge technology and equipment.

With our know-how and experience, we meet the most stringent quality demands. The UNICASE concept, which we developed in 1981 quickly became the international standard for the manufacture of gear unit housings. Today, the focus of our innovation is on intelligent, functionally variable drive technology for Industry 4.0 applications.

- ▶ Subsidiaries in 36 countries
- ▶ Many agencies worldwide
- ▶ Fast and reliable service in the national language, thanks to local contact partners
- ▶ Production facilities at locations in Germany, Italy, Poland, the USA and China
- ▶ Latest technology for the production of gear units, motors and drive electronics
- ▶ Highest quality standards at all locations
- ▶ Dependability, flexibility and always with customer benefits in view

We are regarded as the technological leaders in the development and production of motors, gear units and drive electronics, and work to the highest quality standards. To dependably meet these standards, we have set up a global network of production facilities for all drive components. Our headquarters, with its technology and logistics centre, and administration offices are located in Bargteheide near

Hamburg. In addition, we have seven production facilities in Germany, Italy, Poland, the USA and China. Whether gearwheels, shafts, housings, motors or drive electronics - all components are produced in our own production facilities with great dependability and flexibility. We therefore offer our customers throughout the world the best possible quality, regardless of the location and circumstances.

Drive Solutions

Drive Electronics

Gear Units

Motors

ATEX

Our products are available in ATEX certified versions.

An optimum and individual drive solution can therefore be created using the modular NORD system consisting of the gear unit, motor and drive electronics. The modular products are perfectly matched and can be combined in many variants. In addition, we offer planning, project management, installation, and service from a single source. If required, industry solutions can be configured as a

complete logistics package, programmed and ready for use. Each modular NORD product combines: highest product quality, short planning and assembly times, high delivery availability, and a good price/performance ratio. Our products are also available in ATEX certified versions.

Geared motors

UNICASE helical gear units

- ▶ Foot or flange mounted
- ▶ Long life, low-maintenance
- ▶ Optimum sealing
- ▶ UNICASE housing

Sizes	11
kW	0.12 – 160
Nm	10 – 26,000
i	1.35:1 – 14,340.31:1

NORDBLOC.1® helical gear units

- ▶ Foot or flange mounted
- ▶ Die-cast aluminium housing
- ▶ UNICASE housing
- ▶ Industry standard dimensions

Sizes	13
kW	0.12 – 37.0
Nm	30 – 3,300
i	1.07:1 – 456.77:1

BLOCK Flachgetriebe

- ▶ Foot mounted, flange mounted or face mounted
- ▶ Hollow or solid shaft
- ▶ Compact design
- ▶ UNICASE housing

Sizes	15
kW	0.12 – 200
Nm	110 – 100,000
i	4.03:1 – 15,685.03:1

NORDBLOC.1® bevel gear units

- ▶ Foot mounted, flange mounted or face mounted
- ▶ Hollow or solid shaft
- ▶ UNICASE housing

Sizes	6
kW	0.12 – 9.2
Nm	50 – 660
i	3.03:1 – 70:1

UNICASE helical worm gear units

- ▶ Foot mounted, flange mounted or face mounted
- ▶ Hollow or solid shaft
- ▶ UNICASE housing

Sizes	6
kW	0.12 – 15.0
Nm	93 – 3.058
i	4.40:1 – 7,095.12:1

UNIVERSAL SI worm gear units

- ▶ Modular
- ▶ Universal mounting
- ▶ Lubricated for life

Sizes	5
kW	0.12 – 4.0
Nm	21 – 427
i	5.00:1 – 3,000.00:1

UNICASE parallel gear units

- ▶ Foot mounted, flange mounted or face mounted
- ▶ Hollow or solid shaft
- ▶ UNICASE housing

Sizes	11
kW	0.12 – 200
Nm	180 – 50,000
i	8.04:1 – 13,432.68:1

UNIVERSAL SMI worm gear units

- ▶ Smooth surfaces
- ▶ Lubricated for life

Sizes	5
kW	0.12 – 4.0
Nm	21 – 427
i	5.00:1 – 3,000.00:1

MAXXDRIVE® industrial gear units

- ▶ All bearing points and sealing surfaces are machined in a single operation
- ▶ UNICASE housing, no joints subject to torque
- ▶ High-precision axis alignment, quiet running
- ▶ Long life, low-maintenance
- ▶ Gear ratio range 5.54 to 400:1 with the same foot dimensions
- ▶ Helical and bevel gear units
- ▶ Integrated high-efficiency axial fan (MAXXDRIVE® XT only)

	MAXXDRIVE®	MAXXDRIVE® XT
Sizes	11	7
kW	1.5 - 6,000	22.0 - 2,100
kNm	15 - 282	15 - 75
i	5.54:1 - 30,000:1	6.14:1 - 22.91:1

DuoDrive

- ▶ IE5+ motor and a single-stage helical gear unit in one housing
- ▶ Extremely high system efficiency
- ▶ Compact wash-down design

Sizes	2
kW	0.35 - 3.0
Nm	5 – 247
i	3.24 – 18.1 : 1

NORD is the only manufacturer that produces modular industrial gear units with an output torque of up to 282,000 Nm in a one-piece UNICASE housing.

ATEX

NORD gear motors and industrial gear units are also available in ATEX certified versions.

Drive electronics

Functions

- ▶ High precision regulation with current vector control
- ▶ Compatible with all common bus systems
- ▶ 4-quadrant operation
- ▶ PLC functionality for drive-related functions
- ▶ Energy-saving function for partial load operation
- ▶ Control and parameterisation tools and simple parameter structure
- ▶ Integrated line filter for compliance with EMC regulations
- ▶ Operation of synchronous and asynchronous motors
- ▶ Control and closed loop regulation
- ▶ POSICON – integrated positioning mode and synchronisation
- ▶ STO and SS1 – integrated functional safety
- ▶ Integrated brake rectifier for motor brake control

Advantages

- ▶ Scalable functionality – flexibility of equipment and function
- ▶ High torque capability for all drive applications
- ▶ Simple commissioning and operation

NORD drive electronics are available in ATEX certified versions.

NORDAC ON:
Decentralised
frequency inverter SK 300P

Decentralised drive unit specially developed to meet the special requirements of horizontal conveyor technology, as well as for the interaction with the new IE5+ synchronous motor

Kenndaten:

- ▶ Power range up to 3.7 kW
- ▶ Wall or motor mounting
- ▶ IP55, IP66, IP69

NORDAC FLEX:
Decentralised
frequency inverter SK 200E

Decentralised drive unit with versatile installation options. Simple commissioning and maintenance through extensive plug-in capability and simple parameter transfer via EEPROM.

Nominal ratings:

- ▶ Power range up to 22 kW
- ▶ Wall or motor mounting
- ▶ IP55, IP66

NORDAC BASE:
Decentralised
frequency inverter SK 180E

Economical decentralised version for simple drive applications. Low installation costs as well as robust design for simple installation outside the control cabinet.

Nominal ratings:

- ▶ Power range up to 2.2 kW
- ▶ Wall or motor mounting
- ▶ IP55, IP66

NORDAC PRO:
Control cabinet inverter
SK 500E

The inverter for all drive applications. Proven technology, large power range and capable of functional expansion with plug-in option modules. Optimised heat dissipation thanks to the variable cooling concept.

Nominal ratings:

- ▶ Power range up to 160 kW
- ▶ Control cabinet installation
- ▶ IP20

NORDAC PRO:
Control cabinet inverter
SK 500P

The next generation of control cabinet inverters. Compact size, innovative and extremely flexible communication and interface concept, functional expansion with optional modules.

Nominal ratings:

- ▶ Power range up to 22.0 kW
- ▶ up to 160 kW, in preparation
- ▶ Control cabinet installation
- ▶ IP20

Motors

Energy-saving motors

Switchable pole motors

Single-phase motors

Smooth motors

ATEX

Explosion protected motors,
gas atmospheres

ATEX

Explosion protected motors,
dust atmospheres

Special features

- ▶ Motors developed and produced by NORD.
- ▶ We produce energy-efficient products for all parts of the world.
- ▶ Products available at all international locations.

NORDAC START:
Motor starter SK 135E

The decentralised starter for all types of soft starting. With integrated motor protection and reversing function for flexible integration into the system.

Nominal ratings:

- ▶ Power range up to 7.5 kW
- ▶ Wall or motor mounting
- ▶ IP55, IP66

NORDAC LINK:
Frequency inverter
SK 250E-FDS

The field distributor for flexible, decentralised installation. Flexibility of equipment and function – free configurability according to requirements and the application. Available as inverter and starter.

Fast commissioning through high level of plug-in capability. Simple servicing of the system through integrated maintenance switch and local manual control facility.

Nominal ratings:

- ▶ Power range up to 7.5 kW
- ▶ Wall mounting
- ▶ IP55, IP65

NORDAC LINK:
Motor starter
SK 155E-FDS

Nominal ratings:

- ▶ Power range up to 3 kW
- ▶ Wall mounting
- ▶ IP55, IP65

Why drive solutions from NORD DRIVESYSTEMS are your best choice

For more than 50 years we have provided our customers with extensive advice and planning security for the planning and implementation of standardised or customised drive solutions with electronic drive technology.

- ▶ NORD provides everything from a single source. All components such as gear units, motors and drive electronics are optimally matched.
- ▶ NORD provides competent local support throughout the world for the planning, design and integration of suitable drive technology.
- ▶ NORD supplies pre-assembled drive systems which are simple and easy to install and maintain.
- ▶ Satisfied customers from all over the world give you confidence in your decision for NORD

Experience, competence and innovation over more than 30 years
NORD Electronic DRIVESYSTEMS GmbH,
a member of the
NORD DRIVESYSTEMS Group

In addition to excellent quality and reliability, drive solutions from **NORD DRIVESYSTEMS** also feature a great depth of production. The drive specialist produces all quality-relevant components in its own facilities. At the beginning of the 1980s, **NORD** started to produce electronic drive technology in Aurich, Lower Saxony. Over the years, the range of inverters, motor starters and electronics was continually expanded and now includes electronic drive technology up to 160 kW. The production location has also been continually extended. Thus, up to 400,000 units can be produced per year.

Introduction

Accessories

The inner values are what counts

Extensive basic equipment

User friendliness

- ▶ Easy adaptation to bus communication systems with optional hardware/software options.
- ▶ Quick and simple diagnostics via easily visible LED indicators
- ▶ Technology units available for display, operation and parameterisation
- ▶ Clear display by large LCD screen in 14 languages (optional)
- ▶ Simple operation and parameterisation through logical parameter structure and intuitive layout of control elements
- ▶ Variants for control cabinet installation, hand-held technology, or direct mounting on the inverter available (only NORDAC PRO)
- ▶ Wireless interface for operation and parameterisation with mobile terminal devices available

Protection and safety functions

- ▶ Frequency inverter protected through
 - ▶ Overvoltage monitoring
 - ▶ Temperature monitoring
 - ▶ Excess current monitoring
- ▶ Communication monitoring
 - ▶ Timeout functions
- ▶ System protection through
 - ▶ Overload monitoring
 - ▶ Thermistor evaluation
 - ▶ Motor temperature monitoring
- ▶ Functional safety
 - ▶ Safe torque switch-off STO
 - ▶ Safe stop SS1-t
 - ▶ Safe speed SLS, SOS
 - ▶ Secure bus communication

(not available in all series)

Inner values are what count

Extensive basic equipment

Load monitor

- ▶ Monitoring of load torque depending on the output frequency
- ▶ Individual adaptation of load monitoring to protect the system from overload in particular frequency ranges

Energy-saving function

- ▶ Maximum efficiency in partial load operation
- ▶ Reduced operating costs due to energy savings of up to 60%
- ▶ Simple adjustment

PI Process controller/PID controller

- ▶ Feedback and evaluation of actual values for implementation of closed-loop control circuit (e.g. flow or dancer control)
- ▶ P and I components can be set separately

Master/slave operation

- ▶ Control of one or more slave inverters by a master inverter
- ▶ Communication via USS or CANopen with control word and setpoint values

Evacuation run

- ▶ Evacuation run possible if the main supply fails
- ▶ Emergency operation with low DC voltage from UPS (e.g. battery) possible

(not available in all series)

Lifting gear functions

- ▶ High-precision current vector control for rapid and precise load take-up
- ▶ Integrated brake chopper to divert generated energy to a brake resistor (brake resistor optional)
- ▶ Brake management for optimum control of an electromechanical holding brake for wear-free brake actuation

Encoder feedback (Servo mode)

- ▶ High-precision speed regulation
- ▶ Highest possible acceleration due to direct feedback of the actual speed characteristics to the frequency inverter and therefore also:
 - ▶ Full torque down to standstill (speed 0)
 - ▶ Digital speed controller with wide range of setting

(not available in all series)

Operation without encoder of PMSM synchronous motors

- ▶ High-precision speed control without incremental encoder (openloop)
- ▶ Maximum acceleration

Link circuit coupling

- ▶ Coupling of the link circuits of multiple frequency inverters
- ▶ Energy-saving effect with balanced motor and generator operation
- ▶ Elimination of brake resistors possible

(not available in all series)

NORDAC frequency inverters for CO₂ reduction:

Realistic speed adjustment

A realistic speed adjustment of drives in the process may save lossy mechanical power control methods such as throttle valves or bypass lines in pump systems. Regulated by a frequency inverter, the motor provides the speed exactly needed by the system, saving additional energy, operational costs and protecting the environment. For this purpose, NORD offers different frequency inverter systems that can be integrated in almost all system topologies. The customer can choose between conventional installation technologies for the control cabinet or – for decentralised use – mounted on or close to the motor to be controlled.

NORD frequency inverters

– whether motor-integrated, wall-mounted or installed in the control cabinet – have high efficiencies and comply with the current energy efficiency regulation IE2. In the devices' technical documentation, NORD indicates the power loss values for several operating points. The advantage is that the customer is now provided with general technical data as well as characteristics for different operating points. For the first time, it is thus possible to include the individual workload of the driven machine into the selection of the most suitable frequency inverter.

Motors in the partial load range

The fact that the drive technology within a machine is oversized is widespread. This is why reasons such as safety factors, efforts to standardise or dynamic characteristics during system operation often cause the motor to operate only occasionally in nominal operation, but primarily in the partial load range. The optimum efficiency of an asynchronous motor is, however, only achieved around its nominal operating point. For speeds and powers below the nominal operating point, its efficiency significantly decreases. Here too, the frequency inverter can help: It recognises the workload situation and, after a short time in the partial load range, lowers the motor magnetisation to the reduced, required level. This reduces motor losses, and the efficiency is actively optimised. For higher load requirements, an automatic readjustment takes place.

Definition of environmentally friendly drive technology

Operation of modern electric motors like the IE4 or IE5+ motors from Getriebebau NORD is only possible in combination with a frequency inverter. The efficiencies of these synchronous motors are considerably higher than with asynchronous motors – not only in the nominal operating point, but also beyond a wide speed and power range.

NORDAC frequency inverters and IE4/IE5+ high-efficiency motors from NORD have been jointly developed and perfectly matched. The achieved optimum of modern drive technology also offers the potential to quickly pay for itself through energy cost savings. This is why the frequency inverters and IE4/IE5+ motors from NORD are the right answer to the question of environmentally friendly drive technology for modern engineering.

Condition monitoring for predictive maintenance

Condition monitoring for predictive maintenance

With condition monitoring, drive and status data is recorded periodically or continuously in order to optimise operational safety and efficiency of machines and systems. Condition monitoring can provide important information for predictive maintenance. The objective is to maintain machines and plants proactively, to reduce downtimes and to increase the efficiency of the entire plant.

Customer benefits

- ▶ Detection and avoidance of impermissible operating states at an early stage
- ▶ Status oriented maintenance replaces time-based maintenance
- ▶ Plannable machinery and plant downtimes based on real drive and process data
- ▶ Reduction of service and material costs
- ▶ Longer service life of components and machines
- ▶ Increase in system availability
- ▶ Avoidance of unplanned downtimes
- ▶ Plannable and cost-optimised maintenance

Condition Monitoring

The **INDUSTRIAL INTERNET of THINGS (IIoT)** focuses on use of the internet in industrial processes and procedures. **IIoT** aims to increase operational efficiency, reduce costs and speed up processes. Sensors and sensor data play a central role to provide the basis for condition monitoring and predictive maintenance.

- ▶ Condition monitoring solutions for predictive maintenance systems integrated into the frequency inverter
- ▶ System is **IIoT** / INDUSTRY 4.0 READY!
- ▶ Available for decentralised and control cabinet solutions

Sensors

- ▶ Interface for digital/analogue sensors
- ▶ Virtual sensors – The integrated PLC can calculate the optimal oil change time

Communication interfaces

- ▶ Threshold values or general status information can be communicated externally (via PROFINET IO and EtherNet/IP)

Integrated PLC

- ▶ Local pre-processing of data with the integrated PLC
- ▶ Pre-processing of threshold values

Function range

A series of three function ranges is available for condition monitoring (CM). The NORD **SmartOilChange** (SOC) function is available as an option.

CM1

CM1 includes the transfer of selected drive information parameters from the frequency inverter to a database in a local industrial computer (IPC). The IPC provides the additional opportunity to collect all drive information parameters and to pass them on to a customer cloud. The frequency inverter's integrated PLC is not used. An Ethernet interface in the frequency inverter is necessary to transfer the data to the local IPC.

CM2

CM2 additionally uses the frequency inverter's integrated PLC for threshold-based evaluation of external sensors (e.g. vibration sensor and motor temperature) or drive information parameters.

CM3

CM3 provides visualisation of the data for each drive in a proprietary NORD dashboard.

SOC

The optional SOC function enables determination of the optimum oil change time on the basis of the virtual oil temperature. The algorithm is executed in the integrated PLC. At present this function is available for 2-stage bevel gear units.

Discussion with experts NORDCON software inclusive

NORDCON software

is the free operating software for control, parameterisation and diagnostics of all NORDAC frequency inverters and motor starters.

Control

A virtual control unit, analogous to a SimpleBox (optional control and parameterisation unit), enables the display of operating values, parameterisation and control of a connected frequency inverter or motor starter.

Parameterisation

By means of a convenient overview the user can view and adjust each available parameter. With the corresponding printing option, parameter lists are generated in printed form either completely or only with the values which deviate from the factory settings. The final data sets can be saved on a PC/laptop and archived for future use or sent by e-mail.

Diagnosis

The NORDCON oscilloscope function is an extremely useful instrument for optimum adjustment of drive systems. By means of line graphs, all drive characteristics (current, torque, etc.) can be recorded and analysed. On the basis of the results, fine tuning of the ideal parameter settings of the relevant drive unit is possible.

PLC programming

A PLC editor is available for creating, editing and managing a PLC program. The PLC programs can also be tested (debugged) with this editor and communicated to the frequency inverter. The programming languages „Structured Text“ and „Instruction List“ according to IEC 61131-3 are supported.

.... and wireless is also possible

NORD opens up a new communication method

With the NORDAC ACCESS BT removable Bluetooth stick you can now make 1:1 connections to your mobile terminal device. Together with the free NORDCON APP, which of course is available for both Android and iOS, you have a practical, smart tool in your pocket, with which you can conveniently access your frequency inverter. The available functions (display operating values, parameterisation and oscilloscope) are familiar from the Windows-based NORDCON software, but are now a little smarter.

Service with the NORDCON APP

The NORDCON APP is a mobile commissioning and service solution with the following advantages for all NORD drives:

- ▶ Dashboard-based visualisation for drive monitoring and fault diagnosis
- ▶ Parameterisation with help function and rapid access to parameters
- ▶ Individually configurable oscilloscope function for drive analysis
- ▶ Backup and recovery function for simple handling of drive parameters

[NORDCON APP](#)

...and why is this now wireless

- ▶ Well, so that you can increase your radius of action when you are working on the device.
- ▶ Because you can communicate with a device inside a safety area without having to enter the danger zone.

For any eventuality Safe stop STO and SS1

Safe stop

Personnel safety and high machine availability are the focus in system operations. After a safety circuit is actuated by opening a safety cover or door, it must be ensured that no rotating system components can result in accidents.

With a motor controlled by a NORD frequency inverter, this is implemented by a safe pulse block which provides protection against the motor restarting, in compliance with the standard.

This safe block includes the voltage supply to the circuit breaker by means of a safety switching device. The frequency inverter is therefore immediately ready to be switched on without re-initialisation after the safety circuit is closed.

Standards

- ▶ DIN EN ISO 13849-1:
Performance Level e
- ▶ DIN EN 61508: SIL 3
- ▶ DIN EN 60204-1: Stop function
- ▶ DIN EN 61800-5-2:
Safety functions

Applications

- ▶ Rotating machine tools (e.g. milling machines)
- ▶ Closed moving systems with safety doors

Advantages at a glance

- ▶ Certified by TÜV NORD
- ▶ Safe Torque Off (STO)
- ▶ Safe Stop 1 (SS1)
- ▶ High availability through continuous online operation
- ▶ Elimination of contactor components
- ▶ Elimination of initialisation times
- ▶ Long service life due to electronic switching (no electromechanical contacts)
- ▶ Low-cost solution with compact device

Functional safety in bus communication

PROFIsafe (FSoE in preparation)

For drives that have been integrated in system controls via Industrial Ethernet, safe communication can be flexibly transmitted via this already existing Ethernet-based network. The need to hardwire a fail-safe wiring, for an STO function for example, is eliminated.

In this case, drive control information and safety information are transmitted via the same communication system. The decentralised and drive-integrated functional safety for NORD drive systems allows for new safety concepts in different industries: Fail-safe functions in application solutions can be implemented without needing to stop the machine. The optional modules read a fail-safe encoder for the fail-safe monitoring of movements. In combination with a higher-level and fail-safe control, these modules can monitor speed ranges and recognise safe directions of rotation. The NORD solution also provides opportunities to connect functional elements of the functional safety environment such as light-blocking grille or emergency-stop switch to the module, and to transmit the signal states as fail-safe to the control.

Standards

- ▶ DIN EN ISO 13849-1:
Performance Level e
- ▶ DIN EN 61508: SIL 3
- ▶ DIN EN 61800-5-2:
Safety functions
- ▶ DIN EN 61800-3-2

Advantages at a glance

- ▶ Connection and evaluation of a fail-safe SIN /COS encoder possible
- ▶ Support of safety functions SLS, SSR, SDI, SOS, SSM

Encoder

If the main aim of a drive application is maximum accuracy, the integration of an encoder into the drive system is essential. The encoder's task can be principally subdivided into the two categories **speed detection** and **position detection**.

Speed detection for speed control

A frequency inverter with integrated speed control can control the motor speed with utmost accuracy, and directly compensate load changes. This requires the use of an **incremental encoder**. The encoder is directly mounted on the motor shaft and connected to the frequency inverter. The frequency inverter evaluates the speed detected by the encoder and uses it to control the motor speed.

Position detection for position control

Frequency inverters with integrated position control (**POSICON**) allow for the performance of drive applications involving exact positioning without additional components such as photocells, limit switches or the like.

Permanent detection of operating values and intelligent calculation methods of the NORDAC frequency inverter allows for optimum control of the target position at any time, and acceleration values matched to the drive application.

Any common encoder type such as **incremental encoder**, **absolute encoder** or **combination encoder** (absolute encoders with additional incremental track) may be used for position control. Also for this application, the encoder is usually mounted on the motor shaft and connected to the frequency inverter.

Encoder types

Absolute encoder and **combination encoder** register the rotation angle and the number of rotations of the encoder shaft. They code this as a unique position. This position is transmitted to the frequency inverter for direct processing. Absolute and combination encoders “remember” the position and can correctly render it even upon system switch-off and switch-on. Referencing the encoder (adjustment to one reference point) is thus not required or only once during system commissioning.

Incremental encoders, however, only transmit binary pulses to the frequency inverter. These pulses are based on the so-called encoder resolution, that is the number of defined pulses per rotation of the encoder shaft. Here, the frequency inverter determines the position by counting the pulses sent by the encoder. By using two tracks shifted by 90° (¼ pulse width), the frequency inverter identifies the direction of rotation of the drive. As incremental encoders can only submit pulses but no absolute positions, faults on the encoder cables may lead to misinterpretations by the frequency inverter. Encoders with an additional zero track, however, deliver an additional “zero pulse” per full rotation of the encoder shaft. It can be used to compensate minor faults. Switching off the system, however, will lead to the total loss of the position. Positioning tasks with an incremental encoder therefore require additional measures (e.g. regular referencing) and, where necessary, additional components (limit or referencing switches) to ensure permanent and safe positioning operation.

The following table gives an overview of the common encoders approved by NORD. Further information on the encoder types can be found under “Options” in the motor catalogues [M7000](#) (asynchronous motors) or [M5000](#) (synchronous motors). Depending on the type of encoder, they can be combined with certain motors from NORD and NORDAC frequency inverters.

When extreme precision is REQUIRED POSICON and PLC

POSICON

Frequency inverters with integrated POSICON functionality are able to determine the actual position of the drive unit via appropriate interfaces. Incremental encoder inputs (TTL/HTL) or connections for absolute encoders are available as interfaces via CANopen® (NORDAC PRO from SK 540E and above and SK 530P and above. Sine wave encoders, SSI, BiSS-C, EnDat 2.1 and HIPERFACE are also available. In addition to conventional point-to-point positioning (absolute positioning), POSICON also provides the facility for relative positioning of endless axes as well as various technology functions (rotating platform „with travel optimisation“, synchronous operation and flying saw).

By means of the standard POSICON position memory and features such as „teach in“, „approach reference point“, „reset position“, „offset position“, „target window positioning“ and „S-ramp“, the frequency inverter can carry out fully independent positioning control. The tasks for the external control system are therefore reduced to the starting pulse and communication of the target position (via digital I/O or at the field bus level). The frequency inverter can even monitor the positioning process and report the operating status.

Applications

- ▶ Lifting gear/shelf storage and retrieval devices with approach to precise positions
- ▶ Running gear of material conveyors / portal cranes with synchronous function of all driven axes
- ▶ Rotating table functions for tool magazines on machines
- ▶ Flying saw: coupling and parallel movement of a positioning axis relative to a moving object

PLC

The intelligent drive electronics with integrated PLC functionality reduces the load on the higher level system control unit. This enables a modular system design. Application data can be evaluated in real time by the decentralised PLC, for example for the optimisation of diagnostic facilities. The PLC functionality enables the application to respond according to the situation.

- ▶ The PLC can be programmed with the NORDCON software (IEC 61131-3, Structured Text ST and Instruction List IL).
There are no license fees or other runtime costs.
- ▶ Customer-specific control functions can be simply integrated with the PLC. Evaluation of sensor data and control of actuators replaces the machine control or drive control.
- ▶ Motion Control function blocks for implementation of movement control based on the PLCopen standard are available.

Applications

- ▶ Regulation/control of one or more devices by the frequency inverter

Frequency inverter for control cabinet application

NORDAC *PRO* SK 500P series

Top class inverter technology

NORDAC *PRO*, SK 500P series

[NORDAC *PRO* - SK 500P](#)

NORDAC *PRO* SK 500P frequency inverters are available for motors with rated powers from 0.25 to 22.0 kW (up to 160 kW, in preparation)(15/18.5/22 kW [available for SK 530P and higher](#)). With their very compact design, the so-called book size format, they are perfect for space-saving installation in control cabinets.

Notable features across the entire product line include:

- ▶ Sensorless current vector control which ensures constant speeds in case of fluctuating loads and very high torques during start-up
- ▶ 200% overload reserve which provides greater operational safety in cranes and lifting gear applications
- ▶ Operation of asynchronous and synchronous motors
- ▶ Integrated brake chopper for 4-quadrant operation
- ▶ Integrated line filter as the basis for optimal EMC performance
- ▶ Integrated PLC, which enables convenient free programming of drive-related functions according to IEC 61131-3.

These features are as much a part of the basic configuration as the separately configurable PID or the process controller.

Functional safety is increasingly becoming the focus of attention in drive technology. To meet the various safety requirements, the NORDAC *PRO* also offers functional extensions to implement single or dual channel solutions for Safe Torque Switch-off and Safe Stop.

An optional removable operating display provides an extensive selection of operational displays and status information. Naturally, it also allows direct access to parameterisation.

As standard, the frequency inverters are equipped with an integrated mains unit to supply the control board. The [USB port](#), which is provided as standard for configuration version SK 530P and higher, also provides the facility of accessing the frequency inverter control board without connection of the mains voltage.

Devices with configuration level SK 530P and higher are equipped with a separate 24 V DC connection. These devices can also be parameterised when the power is switched off. Restricted diagnosis and communication with the bus is also retained.

Optional SK CU5 extensions, which can be combined with all SK 530P or SK 550P devices, complete the range of functions.

These include the encoder extension or the universal encoder interface for connection of a wide range of encoders (e.g. SSI, EnDat 2.1), which in combination with the installed POSICON are the ideal solution for all types of positioning (relative and absolute). Only one SK CU5 extension can be connected between the frequency inverter and the operating display.

An Ethernet interface is integrated in configuration levels SK 550P and above. During commissioning this can be simply set by switching a parameter to the required dialect (Ethernet/IP®, EtherCAT®, PROFINET IO® or POWERLINK). The great flexibility for system planning is enhanced by the comparatively small variance in hardware

Introduction
NORDAC PRO SK 500P
NORDAC PRO SK 500E
NORDAC LINK
NORDAC ON
NORDAC FLEX
NORDAC BASE
NORDAC START
Accessories

Basic configuration

- Sensorless current vector control (ISD control) for high precision control and fast response times
- Brake management, electromechanical holding brake
- Brake chopper to divert generated energy to a brake resistor
- CANopen® including drive profile DS402
- POSICON variants with positioning function (relative and absolute)
- RS-485/RS-232 diagnostic interface
- 4 switchable parameter sets for flexible use of parameter settings (e.g. switching between drive units with different motor data)
- All common drive functions such as acceleration/braking on a ramp, S curves
- Parameters pre-set with standard values, hence immediately ready for use
- Scalable display values
- Stator resistance measurement to ensure optimal control characteristics
- Integrated PLC functionality
- Plug-in connection terminals
Available for all devices up to 2.2 kW

Optional

- Interfaces for many Industrial Ethernet-based bus systems
- Removable operating display with extensive operating and status indicators. Parameter editing facility.
- Variants for implementation of safe drive functions (e.g. STO, SS1-t)
- Interface extensions for connection of encoders and IOs
- USB-C interface for parameterisation via PC using the NORDCON software, without additional connection of a mains or control voltage.

NORD provides the new SK 500P with features for easier working:

Electrical connection Power terminals

In addition to the control terminals on the front (which are always pluggable), for the two small sizes of frequency inverters with rated powers up to 2.2 kW, all other power terminals (e.g. line and motor connections, connections to multi-function relays, etc.) can be removed for maintenance. In this way, wiring of the very compact devices can be carried out easily and safely even in confined control cabinet spaces.

The architecture of Size 3 (frequency inverters with rated powers of 3.0 kW and above) allows so much space that a plug-in design of the power terminals would not provide any further advantage.

Control terminals

Pluggable control terminals are nothing special. However, the fact that the NORDAC PRO is equipped with an integrated „3rd hand“ which simply fixes the spring terminals for wiring will probably be gladly welcomed by most technicians.

Parameter setup

... do you want to view operating values or error messages or access and modify frequency inverter parameter settings?

Use the method that suits you:

- ▶ Direct access with the snap-on SK TU5-CTR technology unit or SK TU5-PAR (optional)
- ▶ Separate SK PAR-5H or SK CSX-3E (optional) control and parameterisation units which can be mounted in the control cabinet doors
- ▶ NORDCON software (free) – by connecting a Windows computer via USB-C ¹ or RJ12
- ▶ NORDCON APP (free) for connection to a mobile terminal device via NORDCON ACCESS BT (optional)
- ▶ Removable data carrier (microSD) for backup and transfer of parameter data sets (optional)

Available for SK 530P and higher

¹ No additional connection of a mains or control voltage required, USB-Cable “SK CE-USB-C-PC-USB-3M” required.

Standards and approvals

All devices of the entire series comply with the standards and directives listed below.

Line filter

Improvement of EMC

General

Line filters are used to reduce the emission of electromagnetic interference. SK 500P frequency inverters are equipped with an integrated class C2 line filter, class C3 line filter for 30 kW and higher, (max. 20 m of shielded motor cable). For devices with nominal powers from 750 W to 5.5 kW, class C1 (max. 5 m of shielded motor cable) is achieved. Various adaptive line filters are available for longer cable lengths or to improve interference suppression.

Chassis line filter, SK HLD

The line filter meets protection class IP20 and enables interference suppression Class C1 with max. 25 m shielded motor cable and Class C2 with max. 50 m cable.

The line filters are installed separately from the frequency inverter.

	Frequency inverters SK 5xxP ...	Line filter type Material No.	Continuous current [A]	Leakage current ¹ [mA]	(Overall) dimensions H x W x D [mm]

¹ Leakage current 1st value: rated for the maximum permissible input voltage fluctuation according to IEC 38 + 10%

Leakage current 2nd value: calculated at maximum input voltage and failure of 2 phases (typically at 50 Hz)

Mains chokes

Reduction of mains feedback

General

It may be necessary for some drive systems to use mains chokes to reduce dangerous mains current peaks. With their use, external mains feedback effects are considerably reduced and the proportion of current harmonics is reduced to a minimum. The input current is reduced to approximately the value of the output current.

It is recommended that a mains choke be used at all times for a frequency inverter capacity of 45 kW and above. This will have an additional positive effect on device protection and EMC characteristics. All chokes have protection class IP00 and are UL-recognised.

Link circuit choke

Reduction of mains feedback

Link circuit choke SK DCL

Similar to a mains choke, reduces the network loads of a frequency inverter that are inherent to its functional principle. It is connected to easily accessible contacts in the frequency inverter's intermediate circuit and is available for 45 kW and above. All chokes have protection class IP00 and are UL-recognised.

Motor chokes

Compensation of cable capacitances

General

Long motor cable lengths (cable capacity) often require the use of additional motor chokes on the frequency inverter output. In addition, the use of motor chokes has a positive effect on device protection and EMC characteristics.

The specified motor chokes are rated for a pulse frequency of 3 to 6 kHz and an output frequency of 0 to 120 Hz. All chokes have protection class IP20 and are UL-recognised.

Braking resistors for dynamic drive characteristics

Bottom-mounted braking resistors SK BRU5

These are available four sizes. The brake resistor can be mounted flat underneath the frequency inverter. Although this increases the installation length and depth by a few centimetres, the basic installation surface in the control cabinet is considerably reduced. The specified resistance values are electrically matched to standard applications. Brake resistors have protection class IP65 and are UL-recognised.

for a maximum duration of 1.2 s

Chassis braking resistors, SK BR2

The resistor elements are integrated into a housing cage and must be connected to the particular frequency inverter via a separate connecting cable.

The brake resistors must be mounted horizontally (apart from SK BR2-xxx/400-C).

A shielded cable which is as short as possible should be used for this purpose.

The brake resistors have protection class IP20 and are UL-recognised.

NORDAC *PRO* frequency inverters

Accessories

Signal converter +/- 10 V

For connection of a bipolar analogue signal to the unipolar analogue input of a frequency inverter, top-hat rail mounting.

Material No.: 278 910 320

Electronic brake rectifier SK EBGR-1

For direct control and supply of an electromagnetic holding brake.

Material No.: 19 140 990

IO expansion SK EBIOE-2

The generous number of standard inputs and outputs on the device can be supplemented using an extension provided for top-hat rail mounting.

Material No.: 275 900 210

Available for SK 530P and higher

NORDAC *ACCESS BT*

Bluetooth adapter SK TIE5-BT-STICK to establish wireless connection between the frequency inverter and mobile terminal devices (e.g. smartphone, tablet). Together with the free NORDCON *APP* for Android or iOS, NORD therefore provides a smart aid for control, parameterisation and troubleshooting of frequency inverters.

Material No.: 275 900 120

MicroSD card, 128 MB

Removable data carrier for archiving and transfer of parameter data sets for the frequency inverter.

Material No.: 275 292 200

Available for SK 530P and higher

EMV-Kit

For EMC-compliant connection of shielded cables and to produce strain relief.

Depending on size and configuration level, various EMC kits are optionally available.

Size of frequency inverter	Shield Motor connection ①	Shield IO ports ②	Shield Control terminals (SK CU5-...) ¹ ③
1	SK HE5-EMC-MS-HS12 275 292 300	SK HE5-EMC-IS-HS1 275 292 304	SK HE5-EMC-CS-HS1 275 292 310

9 and 10	SK EMC 2-7 275 999 071		

¹ Available for SK 530P and higher only in combination with (1) "motor connection shield"

² Two-part

CANopen® connection

The CANopen® interface is equipped with a 4-pole screw terminal as standard.

The following alternatives are optionally available.

Designation	Material No.	Description
SK TIE5-CAO-WIRE-2X4P	275 292 201	CANopen® double terminal (screw terminal, 2x4-pole)
SK TIE5-CAO-2X-RJ45	275 292 202	CANopen® RJ45 adapter

Optional:
RJ45 adapter for
CANopen

DRIVESYSTEMS

Frequency inverter for control cabinet application

NORDAC *PRO* SK 500E series

Powerful and versatile NORDAC PRO, SK 500E series

[NORDAC PRO - SK500E](#)

NORDAC PRO SK 500E frequency inverters are available for motors with rated powers of 0.25 – 160 kW. With a very compact design they are perfect for space-saving installation in control cabinets.

Notable features across the entire product line include:

- ▶ Sensorless current vector control which ensures constant speeds in case of fluctuating loads and very high torques during start-up
- ▶ 200% overload reserve which provides greater operational safety in cranes and lifting gear applications
- ▶ Operation of asynchronous and synchronous motors
- ▶ Integrated brake chopper for 4-quadrant operation
- ▶ Integrated line filter as the basis for optimal EMC performance

These features are as much a part of the basic configuration as the separately configurable PID or the process controller. These controllers independently carry out the control tasks in your application. The range is supplied with either an integrated 24 V power supply unit or a separate connection for the control board supply.

The advantage of externally powered frequency inverters is that access to parameter data and communication through any bus interfaces is possible even when the power is switched off. Moreover, an evacuation run controlled by the inverter can be performed, which constitutes an enormous boost in safety for lifting gear and similar safety-critical drive applications.

The SK 51xE and SK 530E and SK 535E models support the Safe Stop function according to EN 13849-1 (up to the maximum safety category 4, stop category 0 and 1). In addition, the SK 53xE version equipped with the built-in POSICON function makes it ideally suitable for all types of positioning tasks (relative and absolute). As standard, an integrated PLC on all SK 520E models and higher allows simple and free programming of drive-related functions in accordance with IEC 61131-3. In addition, the top model SK 540E/SK 545E features a universal encoder interface which allows connection of SSI or EnDat 2.1 encoders. The frequency inverters maintain uniform dimensions even with the different functional configurations.

Basic configuration

- Sensorless current vector control (ISD control) for high precision control and fast response times
- Brake management, electromechanical holding brake
- Brake chopper to divert generated energy to a brake resistor
- RS-232 diagnostic interface
- 4 switchable parameter sets for flexible use of parameter settings (e.g. switching between drive units with different motor data)
- All common drive functions such as acceleration/braking on a ramp
- Parameters pre-set with standard values, hence immediately ready for use
- Scalable display values
- Stator resistance measurement to ensure optimal control characteristics

Optional

- Interfaces for many bus systems
- Various control options (switches, potentiometers or parameterisation units)
- Variants with functional safety (Safe Stop (STO, SS1))
[Available for SK 510E and above](#)
[\(except for frequency inverters with mains voltages <230 V AC\)](#)
- Variants with incremental encoder interface for speed feedback (servo mode)
[Available for SK 520E and higher](#)
- Variants with PLC functionality
[Available for SK 520E and higher](#)
- POSICON variants with positioning function (relative and absolute)
[Available for SK 530E and higher](#)
- Universal encoder interface
[Available for SK 540E and higher](#)

- ¹ 2 digital IOs optionally parameterisable as DIN or DOUT
- ² Parameterisable with DOUT functions
- ³ AIN/AOUT can also be used for digital signals.
AIN: 0(2) – 10 V, 0(4) – 20 mA, size 5 and above additionally ± 10 V
- ⁴ Function can only be implemented through a digital input,
- ⁵ speed control only available with SK 520E or higher.

NORDAC *PRO* SK 500E frequency inverter

Interfaces for operation, parameterisation and communication

Operation and parameterisation

Optional modules with up to 14 languages for displaying status and operational indicators, parameterisation and operation of the frequency inverter. In addition to

variants for direct mounting on the device or installation in a control cabinet door, handheld versions are also available. See also Accessories starting on page 165

Type	Designation	Material No.	Description	Remarks
	PotentiometerBox SK TU3-POT	275 900 110	Suitable for control, potentiometer 0 ... 100% .	Installation in the SK TU3 slot on the FI. ¹
	ParameterBox SK TU3-PAR	275 900 100	Suitable for control and parameterisation, LCD screen (illuminated), plain text display in 14 languages, memory for 5 device data sets, convenient control keypad.	Installation in the SK TU3 slot on the frequency inverter. ¹
	ControlBox SK TU3-CTR	275 900 090	Suitable for control and parameterisation, 4-digit, 7-segment display, convenient control keypad.	Installation in the SK TU3 slot on the FI. ¹
	SimpleBox SK CSX-0	275 900 095	Suitable for control and parameterisation, 4-digit, 7-segment display, direct control of a device, one-button operation.	The module is connected to the RJ 12 interface of the frequency inverter and does not occupy the option slot for SK TU3 modules. Simultaneous control of a bus interface is therefore possible. Mounted on the frequency inverter
	ParameterBox SK PAR-5H	275 281 614	Control and parameterisation, LCD (illuminated), plain text display in 14 languages, direct control of up to five devices, memory for five device data sets, convenient control keypad, communication via RS485, including 1.5 m connection cable. Handheld, suitable for installation in a control cabinet door. IP54	Connection for data exchange with NORDCON <i>STUDIO</i> to a PC (USB 2.0), (standard "USB-C" connection cable required, e.g. material number: 275 292 100) Power supply, e.g. directly via frequency inverter or PC
	SimpleControlBox SK CSX-3E	275 281 413	Suitable for control and parameterisation, 4-digit, 7-segment display, direct control of a frequency inverter, convenient control keypad.	Electrical data: 4.5 ... 30 V DC / 1.3 W, Supply e. g. directly via the frequency inverter. Control cabinet installation
	Control and parameterisation software NORDCON		Software for control and parameterisation as well as support for commissioning and fault analysis of NORD electronic drive technology. Parameter names in 14 languages	Free download: www.nord.com
	Bluetooth stick NORDAC <i>ACCESS BT</i> SK TIE5-BT-STICK	275 900 120	Interface for wireless connection to a mobile terminal device (e.g. tablet or smartphone) via Bluetooth. The NORDCON <i>APP</i> , the NORDCON software for mobile terminal devices, enables smart operation and parameterisation as well as commissioning assistance and fault analysis of NORD electronic drive technology.	Available free of charge for Android and iOS 

¹ Cannot be combined with other SK TU3 modules as only one slot is available on the device..

Industrial Ethernet, Field bus and IO extensions

Variant		Designation Material No.	Description Connection	Remarks
EtherCAT®		SK TU3-ECT 275 900 180	Ethernet-based bus interface Type EtherCAT®. 2 x RJ45	Baud rate: maximum 100 MBaud 24 V DC connection: via terminal Usable as a gateway to control up to a total of four frequency inverters.
EtherNet/IP®		SK TU3-EIP 275 900 150	Ethernet-based bus interface Type EtherNet / IP® 2 x RJ45	Baud rate: maximum 100 MBaud 24 V DC connection: via terminal Usable as a gateway to control up to a total of four frequency inverters.
POWERLINK		SK TU3-POL 275 900 140	Ethernet-based bus interface Type POWERLINK 2 x RJ45	Baud rate: maximum 100 MBaud 24 V DC connection: via terminal Usable as a gateway to control up to a total of four frequency inverters.
PROFINET IO®		SK TU3-PNT 275 900 190	Ethernet-based bus interface Type PROFINET IO®. 2 x RJ45	Baud rate: maximum 100 MBaud 24 V DC connection: via terminal Usable as a gateway to control up to a total of four frequency inverters.

Line filter

Improvement of EMC

General

Line filters are used to reduce the emission of electromagnetic interference. SK 500E series frequency inverters are equipped with an integrated class C2 (max. 20 m shielded motor cable) or class C1 (size 1-4, max. 5 m shielded motor cable) line filter. Various adaptive line filters are available for longer cable lengths or to improve interference suppression.

Chassis line filter, SK HLD

The line filter meets protection class IP20 and enables interference suppression Class C1 with max. 25 m shielded motor cable and Class C2 with max. 50 m cable.

The line filters are installed separately from the frequency inverter.

¹ Leakage current 1st value: rated for the maximum permissible input voltage fluctuation according to IEC 38 + 10%

Leakage current 2nd value: calculated at maximum input voltage and failure of 2 phases (typically at 50 Hz)

Bottom-mounted line filter, combination filter SK NHD

The line filter meets protection class IP20 and is available for frequency inverter powers of 7.5 kW (400 V). The line filter can be mounted flat underneath the frequency inverter. This reduces the space requirement. These combination filters combine the advantages of a line filter and a line choke in a single housing and enable class C1 interference suppression with max. 50 m shielded motor cable and class C2 with max. 100 m cable.

Leakage current 2nd value: calculated at maximum input voltage and failure of 2 phases (typically at 50 Hz)

Line filter

Improvement of EMC

Bottom-mounted line filter, SK LF2

The line filter meets protection class IP00 and is available for frequency inverter powers of 37 kW (400 V). The line filter can be mounted flat underneath the frequency inverter.

This reduces the space requirement. These line filters enable class C1 interference suppression with max. 50 m shielded motor cable and class C2 with max. 100 m cable.

	Frequency inverters SK 5xxE ...	Line filter type Material No.	Continuous current [A]	Leakage current ¹ [mA]	(Overall) dimensions H x W x D [mm]

Leakage current 2nd value: calculated at maximum input voltage and failure of 2 phases (typically at 50 Hz)

Mains chokes

Reduction of mains feedback

General

It may be necessary for some drive systems to use mains chokes to reduce dangerous mains current peaks. With their use, external mains feedback effects are considerably reduced and the proportion of current harmonics is reduced to a minimum. The input current is reduced to approximately the value of the output current.

It is recommended that a mains choke be used at all times for a frequency inverter capacity of 45 kW and above. This will have an additional positive effect on device protection and EMC characteristics. All chokes have protection class IP00 and are UL-recognised.

Link circuit choke

Reduction of mains feedback

Link circuit choke SK DCL

Similar to a mains choke, reduces the network loads of a frequency inverter that are inherent to its functional principle. It is connected to easily accessible contacts in the frequency inverter's intermediate circuit and is available for 45 kW and above. All chokes have protection class IP00 and are UL-recognised.

Frequency inverter SK 5xxE ...	Choke type Material No.	Continuous current [A]	Inductance [mH]	(Overall) dimensions H x W x D [mm]

Motor chokes

Compensation of cable capacitances

General

Long motor cable lengths (cable capacity) often require the use of additional motor chokes (output chokes) on the frequency inverter output.

In addition, the use of motor chokes has a positive effect on device protection and EMC characteristics.

The specified motor chokes are rated for a pulse frequency of 3 to 6 kHz and an output frequency of 0 to 120 Hz. All chokes have protection class IP00 and are UL-recognised.

Braking resistors for dynamic drive characteristics

Bottom-mounted braking resistors SK BR4

are available in four sizes for frequency inverter capacities of up to 7.5 kW (400 V). This brake resistor can be mounted flat or vertically, next to the frequency inverter. This reduces the space requirement.

The specified resistance values are electrically matched to standard applications.

All brake resistors have protection class IP40 and are UL-recognised.

	Frequency inverter SK 5xxE ...	Resistor type Material No.	Resistance [Ω]	Continuous output [W]	Short-term power [kW] ¹	(Overall) dimensions L x W x D [mm]

for a maximum duration of 1.2 s

Chassis braking resistors, SK BR2

The resistor elements are integrated into a housing cage and must be connected to the particular frequency inverter via a separate connecting cable. The brake resistors must be mounted horizontally (apart from SK BR2-xxx/400-C). A shielded cable which is as short as possible should be used for this purpose.

All brake resistors have protection class IP20 and are UL-recognised.

Connection Kit HTL encoder WK 4/2/4*680 OHM

For connection of an HTL encoder to the TTL encoder input of the frequency inverter, top-hat rail mounting.

Material No.: 278 910 340

RJ45 WAGO connection module

For example to connect a CANopen® encoder to one of the two RJ45 connection sockets of the frequency inverter.
Material No.: 278 910 300

Signal converter +/- 10 V

For connection of a bipolar analogue signal to the unipolar analogue input of a frequency inverter (up to size 4), top-hat rail mounting.
Material No.: 278 910 320

IO expansion SK EBIOE-2

The generous number of standard inputs and outputs on the device can be supplemented using an extension provided for top-hat rail mounting.
Material No.: 275 900 210
[Available for SK 540E and higher](#)

Electronic brake rectifier SK EBGR-1

For direct control and supply of an electromagnetic holding brake.
Material No.: 19 140 990

Adapter module V/I CONVERTER 10 V/20 mA

The module serves the conversion of analogue (0–10 V) signals into equivalent current signals (0–20 mA).
Part no.: 278910315

Adapter module level adapter HTL – RS422

The module serves the conversion of HTL or TTL signals into complementary signals with RS422 levels, top-hat rail mounting
Part no.: 278910360

Field distributors NORDAC *LINK* for decentralised applications

Frequency inverter SK 250E-FDS, Motor starter SK 155E-FDS

Easy connection NORDAC LINK, SK 250E-FDS and SK 155E-FDS series

[NORDAC LINK
Frequency inverter](#)

[NORDAC LINK
Motor starter](#)

General conveyor technology and intralogistics require drive control systems which can be installed easily and are easily accessible during operation or if maintenance is required. The NORDAC LINK field distribution system supplements the NORD DRIVESYSTEMS product range and provides customers with a drive control which can be flexibly installed close to the motor. System costs can be significantly reduced thanks to decentralised drive technology.

- ▶ Flexible configuration and function – freely configurable according to requirements and the application
- ▶ Available as frequency inverters (up to 7.5 kW) and motor starters (up to 3 kW)
- ▶ Fast commissioning due to simple operation
- ▶ Simple and reliable plug-in capability
- ▶ Simplified system maintenance due to integrated maintenance switch and local manual control facility
- ▶ Can be integrated into all common bus systems

AS-Interface

Modern automation systems

Modern automation systems have a wide range of requirements, so that a suitable bus system and drive components must be selected in order to ensure efficient implementation.

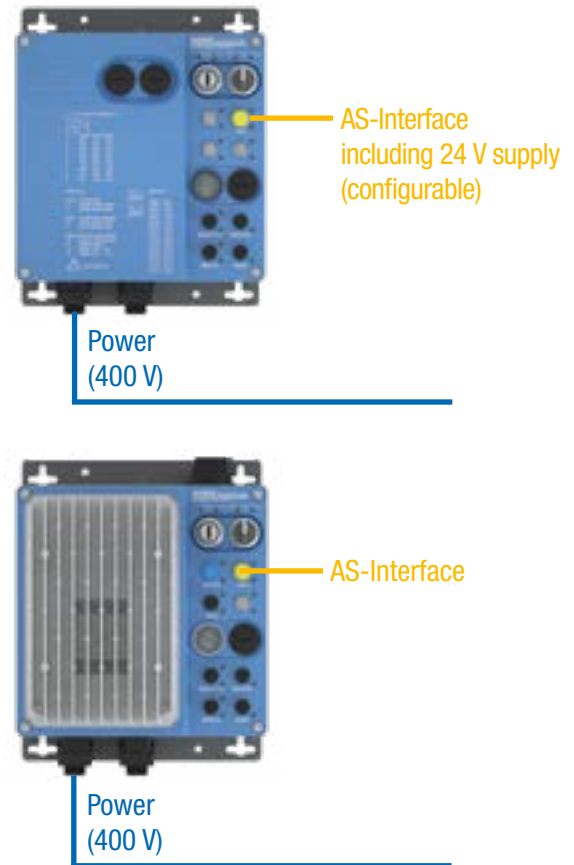

AS-Interface

For the lower field level, the AS-Interface is a cost-effective solution which enables the networking of binary sensors and actuators. With NORDAC *LINK*, special versions which provide an appropriate solution by means of an AS-Interface, are available for this price-sensitive area.

The supply voltage (power) is connected separately via the corresponding plugs. Depending on the version of the device, the control voltage of the frequency inverter is generated either via an integrated power supply unit or is supplied separately via the yellow AS-Interface cable. This eliminates the need for an additional AUX cable (black). The type of addressing possible (standard or A/B slaves) also depends on the version of the device. The „ASI“ and „AUX“ variants are designed as double slave with the frequency inverter. With the double slave, there are two physical A/B slaves in the device which can be configured for extended data transfer according to the CTT2 protocol. Additional IO bits (1 x BUS IN + 2 x BUS OUT) are available for the so-called extended data transfer.

Available in the following devices:

SK 155E-FDS-...-ASI,
SK 175E-FDS-...-ASI,
SK 270E-FDS,
SK 280E-FDS

PROFIBUS DP®

This bus system allows for cyclic exchange of 4 control or 4 status bits via a process data object (with up to 12 Mbps). Addressing is performed via a rotary encoding switch. The PROFIBUS® termination resistor can be set via a standard M12 termination resistor. Connection is made with M12 plug connectors.

Available in all
SK 175E ... ASI devices

Variant	Slave profil	Slave typ	Control voltage	Inputs/Outputs	Configuration via parameters
-ASI	S-7.A	A/B-Slave	Yellow AS-I cableg	4I/40 + 1I/20 ¹	●

² If necessary, individual inputs can be defined at the factory by the use of certain optional modules.

LED- status indicators use/meaning

The frequency inverter is equipped with LED indicator lights. These are used to indicate the signal statuses of the relevant option slot.

One option slot is closed with a transparent screw cap. The LED status indicator lights which are installed in this option slot act as diagnostic LEDs and are therefore always visible.

Ausführung LED-Anzeige	Use/Meaning
Yellow - Single colour - Static	Indication of the signal status („ON“ / „OFF“) or the associated function of the IOs.
Red/Green - Single or dual colour - Static or dynamic	Indication of the operating statuses on the inverter or communication level.

Can be extended with a maximum of two further option modules (SK CU4)

NORDAC LINK motor starter

Interfaces for operation, parameterisation and communication

Operation and parameterisation

Optional modules with up to 14 languages for displaying status and operational indicators, parameterisation and operation of the frequency inverter. In addition to variants for direct mounting on the device or installation in a control cabinet door, hand held versions are also available. See also Accessories starting on page 165

Type	Designation	Description	Remarks
	ParameterBox SK PAR-5H 275 281 614	Control and parameterisation, LCD (illuminated), plain text display in 14 languages, direct control of up to five devices, memory for five device data sets, convenient control keypad, communication via RS485, including 1.5 m connection cable. Handheld, suitable for installation in a control cabinet door. IP54	Connection for data exchange with NORDCON <i>STUDIO</i> to a PC (USB 2.0), (standard "USB-C" connection cable required, e.g. material number: 275 292 100) Power supply, e.g. directly via frequency inverter or PC
	SimpleControlBox SK CSX-3H 275 281 013	Control and parameterisation, 4-digit, 7-segment display, direct control of a device, convenient control keypad, including 2 m connection cable Handheld, IP54	Electrical data: 4.5 ... 30 V DC / 1.3 W, supply e. g. directly via the frequency inverter
	Control and parameterisation software NORDCON	Software for control and parameterisation as well as support for commissioning and fault analysis of NORD electronic drive technology. Parameter names in 14 languages	Free download: www.nord.com
	Bluetooth-Stick NORDAC <i>ACCESS BT</i> SK TIE5-BT-STICK 275 900 120	Interface for wireless connection to a mobile terminal device (e.g. tablet or smartphone) via Bluetooth. With the aid of the NORDCON APP, the NORDCON software for mobile terminal devices, enables smart operation and parameterisation as well as commissioning assistance and fault analysis of NORD electronic drive technology.	Available free of charge for Android and iOS 

Brake resistors for dynamic drive characteristics

Chassis braking resistors, SK BRW5

The resistor elements are integrated into a housing cage and must be connected to the particular frequency inverter via a separate connecting cable.

The brake resistors must be mounted horizontally. A shielded cable which is as short as possible should be used for this purpose.

The brake resistors have protection class IP65.

Frequency inverters SK 2xxE-FDS ...	Resistor type Material No.	Resistance [Ω]	Continuous output [W]	Short-term power [kW] ¹	(Overall) dimensions L x W x H [mm]

3,0 kW ... 7,5 kW	SK BRW5-2-150-450 278 281 071	150	450	8	405 x 120 x 123

Temperature monitoring for SK BRW5 resistors integrated (2 terminals 4 mm)

Bimetallic switch as opener.
Nominal switching temperature: 180°C.

¹ Once within 120 s,
for a maximum duration of 1.2 s

External braking resistors

Like internal braking resistors, external braking resistors are intended for applications with low braking energy. Unlike internal braking resistors, their nominal continuous power is fully available. External braking resistors cannot be retrofitted and must therefore be taken into account in the order. The attachment increases the frequency inverter's width by 44 mm.

Available on request

Internal braking resistors

Internal brake resistors are intended for applications in which slight or only sporadic and brief braking (e.g. continuous conveyor equipment, mixing equipment) is to be expected. In addition, they enable the use of the frequency inverter in very confined spaces or in an explosive atmosphere.

Internal brake resistors cannot be retrofitted and must therefore be taken into account in the order.

For thermal reasons, the rated continuous output is limited to 25%.

Frequency inverter for horizontal conveyor applications

NORDAC *ON* and *ON+* SK 300P series

Top class inverter technology

NORDAC *ON*, SK 300P series

[NORDAC *ON*](#)

The NORDAC *ON* is a compact, smart frequency inverter for decentralised use that has been specially developed to meet the special requirements of horizontal conveyor technology, as well as for the interaction with the new IE5+ synchronous motor (NORDAC *ON+*).

Focused

The NORDAC *ON* is optimised for the common range of functions in horizontal conveyor technology. The following functions are included as standard:

- ▶ Integration of sensors via digital inputs
- ▶ If required, an integrated brake chopper dissipates regenerative energy to an optional braking resistor
- ▶ Brake management for optimum control of an electromagnetic holding brake for wear-free brake actuation
- ▶ Quick and simple diagnostics via easily visible LED indicators
- ▶ The Safe Torque Off (STO) function can be optionally integrated into the frequency inverter and is controlled via two safe inputs
- ▶ Other functional safety-related functions, for example SS2, SLS, SDI, SSM, SOS, SMS or SSR, can also be integrated. Communication is then possible via PNS or FSoE. - [in preparation](#)

Compact

The power range from 0.37 to 3.7 kW (NORDAC *ON/ON+*) or to 1.5 kW (NORDAC *ON PURE*) is covered by three sizes. Power-size assignments optimised this way allow for installations even in a very small space.

NORDAC *ON* was designed for use with asynchronous motors, whereas NORDAC *ON+* is intended for combination with synchronous motors and supplements the NORD high-efficiency portfolio around the new IE5+ motor generation.

In case the frequency inverter should or could not be mounted on the motor, it can alternatively be mounted on the wall to connect the converter close to the drive.

NORDAC *ON PURE*

PURE (in preparation)

NORDAC *ON PURE* extends the application area of the compact frequency inverter to applications in the food and beverage (F&B) industry.

Therefore, the device's housing has been specifically adjusted to the requirements in the F&B sector. Thanks to the **NXD tupH** surface treatment, the protection class achieves IP69, and all device openings have been reduced to a minimum.

Apart from the diagnostic opening, there are only robust M23 circular connectors for the hybrid connection of the mains/control voltage and the Ethernet connection.

The NORDAC *ON PURE* is intended for mounting on the equally F&B-enabled NORD IE5+ smooth motor (without ventilation) or alternatively as wall mounting option. Special hygienic cables are available for the electrical connection.

Digitalisation

As with all NORD frequency inverters, the new member of the NORDAC family is equipped with a powerful PLC for functions close to the drive. It can process the data from connected sensors and actuators, autonomously initiate control sequences and communicate drive and application data to the control centre, networked components or to cloud storage.

For this purpose, both frequency inverter versions have an integrated Ethernet interface and thus are ideally equipped for integration into modern automation systems. Whether for ProfiNet, EtherNet/IP or EtherCAT – the required protocol can be easily set via parameters.

100% Plug-and-play

All connections are pluggable and ensure quick, easy, error-minimised commissioning and maintenance on site. The 24 VDC supply for control and communication is also integrated in the 3-phase 400 V supply and is realised via a 6-pole plug connector. The daisy chain connector can be used to supply several drives in series in order to optimise the required cable length.

Robust

The frequency inverter housing is made entirely from aluminium and with a high IP protection class (up to IP66) it is thus also suitable for harsh environmental conditions.

In addition, the NORDAC *ON* / *ON+* can be operated in a temperature range from -30 to +40°C and can therefore also be used in deep-freeze applications.

NORDAC *ON*

NORDAC *ON*
Wandmontage-Variante

NORDAC *ON* options

Functional Safety

NORDAC *ON* and NORDAC *ON+* frequency inverters in sizes 2 and 3 have the “Functional safety” option.

Available in the following devices:

SK 301P, SK 311P

Functions	IOs	Remarks
Functional safety: STO - PLe / SIL 3 SS1-t - PLd / SIL 2	2 safe DIN	Functional safety: 2-channel connection

Internal braking resistors

Internal braking resistors are intended for applications in which slight or only sporadic and brief braking is to be expected.

Internal braking resistors cannot be retrofitted and must therefore be taken into account in the order. For thermal reasons, the rated continuous output is limited to 25%.

Interfaces for operation, parameterisation and communication

Operation and parameterisation

Optional modules with up to 14 languages for displaying status and operational indicators, parameterisation and operation of the frequency inverter. In addition to variants for direct mounting on the device or installation in a control cabinet door, handheld versions are also available. See also Accessories starting on page 165

	Type Designation Part number	Description	Remarks
	ParameterBox SK PAR-5H 275 281 614	Control and parameterisation, LCD (illuminated), plain text display in 14 languages, direct control of up to five devices, memory for five device data sets, convenient control keypad, communication via RS485, including 1.5 m connection cable. Handheld, suitable for installation in a control cabinet door. IP54	Connection for data exchange with NORDCON <i>STUDIO</i> to a PC (USB 2.0), (standard "USB-C" connection cable required, e.g. material number: 275 292 100) Power supply, e.g. directly via frequency inverter or PC
	SimpleControlBox SK CSX-3H 275 281 013	Control and parameterisation, 4-digit 7-segment display, direct control of a device, convenient control keypad, including 2 m connection cable. Handheld, IP54	Electrical data: 4.5 ... 30 V DC / 1.3 W, Supply e.g. directly via the frequency inverter.
	Control and parameterisation software NORDCON	Software for control and parameterisation as well as support for commissioning and fault analysis of NORD electronic drive technology. Parameter names in 14 languages	Free download: www.nord.com
	Bluetooth-Stick NORDAC <i>ACCESS BT</i> SK TIE5-BT-STICK 275 900 120	Interface for wireless connection to a mobile terminal device (e.g. tablet or smartphone) via Bluetooth. The NORDCON <i>APP</i> , the NORDCON software for mobile terminal devices, enables smart operation and parameterisation as well as commissioning assistance and fault analysis of NORD electronic drive technology.	Available free of charge for Android and iOS 

Frequency inverter for decentralised applications

NORDAC *FLEX* SK 200E series

Master of adaptation

NORDAC FLEX, SK 200E series

[NORDAC FLEX](#)

Frequency inverters are now essential components of electrical drive technology. They are used for a wide range of automation tasks in almost all fields of application.

Universal

The NORDAC FLEX, the all-rounder among decentralised frequency inverters, has established itself in almost all areas of engineering and industry.

This is due not only to the wide range of available powers (up to 22 kW - which by no means is something that can be taken for granted in decentralised drive technology) but also to the wide selection of functions and the flexibility offered by its comprehensive range of accessories.

Economical

The series has been structured with various function levels in order to take efficiency and customers' application-specific requirements into consideration. In addition, we have arranged the series into two equipment groups which optimally cater for typical customer applications for conveyors, pumps and fans.

Energy-saving

Even, or especially for applications in which a frequency inverter is not strictly necessary from a technical point of view (constant speed with 50 Hz), the NORDAC FLEX beats every unregulated drive unit with its enormous energy-saving characteristics, particularly in partial load operation

Basic configuration

- Sensorless **current vector control** and **V/f characteristic curve**
- 4 switchable **parameter sets** for flexible use of parameter settings
- All common **drive functions** e.g. acceleration / braking on a ramp, PI controller
- **Parameters** with pre-set standard values
- **POSI CON** for relative and absolute positioning
- **Incremental encoder interface** for speed feedback
- **Stator resistance measurement**
- **PLC functionality** for drive-related functions
- Operation of **three-phase asynchronous motors (ASM)** and **permanent magnet synchronous motors (PMSM)**

Optional

- Interfaces for **8 field bus systems at present**
- **Various control options** (switch, potentiometer or control and parameterisation units)
- Versions with **functional safety** (Safe Stop)
- **IO modules** for additional analogue and digital inputs and outputs
- **System plug connectors** for power connection of mains and motor cables (industrial plug connectors) as well as for control and signal cables (M12 plug connectors)
- **ATEX versions** for operation in zone 22-3D

Pump/fan applications with the SK 2x0E

1~	230 V	0.25	-	0.55 kW
3~	230 V	0.25	-	11.0 kW
3~	400 V	0.55	-	22.0 kW

Typical requirements

- ▶ Speed setpoints/process signals via analogue input, e.g. pressure sensors
- ▶ Stand-alone operation of individual drive units or mobile systems, thanks to integrated control voltage
- ▶ No motor or brake control necessary

Conveyor applications with SK 2x5E (SK 2x0E, Size 4)

1~	115 V	0.25	-	0.75 kW
1~	230 V	0.25	-	1.1 kW
3~	230 V	0.25	-	4.0 kW (11.0 kW)
3~	400 V	0.55	-	7.5 kW (22.0 kW)

Typical requirements

- ▶ Separate voltage levels 400 V / 24 V, e.g. for separate start-up of bus system / control level and power
- ▶ Adjustable brake control with integrated rectifier
- ▶ No processing of analogue values required as bus control is frequently used

Basic configuration SK 2x0E series

4 digital inputs

e.g. for left/right enabling, fixed frequencies or parameter set switchover

2 digital outputs

e.g. for reporting errors or various limit values

1 or 2 analogue inputs

e.g. connection for speed setpoint or process signals

Integrated 24 V power supply

24 V control voltage for stand-alone operation

Basic configuration SK 2x5E series

4 digital inputs

e.g. for left/right enabling, fixed frequencies or parameter set switchover

1 digital output

e.g. for reporting errors or various limit values

Connection for external 24 V power supply

Separate voltage levels for power and control, e.g. for separate start-up or online availability when the power is switched off

Integrated brake rectifier

Application and release time optimally adjustable via parameter

If you are looking for a controlled drive unit

If you are looking for a drive unit with which your machine can perform specific functions.

We can supply the optimum device. A drive unit consisting of a combination of series production units that is perfectly tailored to your requirements. A drive unit which can be easily retrofitted with a wide range of accessories to adapt it to changed conditions.

If you have:

Limited space

- ▶ Restricted installation space in the machine

High performance requirements

- ▶ High-performance drive units
- ▶ High breakaway torques

A need for high-precision speed control

- ▶ Speed fluctuations are not permissible
- ▶ Perfect load take-up (lifting equipment) is required
- ▶ Compensation for fluctuating loads (conveyor belts/conveying equipment)

A need for high-precision positioning

- ▶ Master-slave synchronisation
- ▶ Movement to fixed positions (storage and retrieval machines)
- ▶ Movement to relative positions (endless belts in bottling plants)
- ▶ Movement of a drive unit to a changing position of a moving drive system (flying saw)

A need for high flexibility

- ▶ Short timeframe in case of service
- ▶ Frequent changes of use of your machine
- ▶ Existing motor and gear unit

A need for plug and play

- ▶ E.g. for large projects or series production machinery
- ▶ Replacement devices for 1:1 exchange in case of service

A need for sustainability

- ▶ Resource-saving operation
- ▶ Use of products with low levels of hazardous substances

Our solution:

Space-saving

- ▶ A compact device designed for the smallest possible overall dimensions
- ▶ Integrable optional modules (e.g. interfaces for field bus connection)
- ▶ Wall mounting kits for installation close to the motor

Powerful

- ▶ Unbeatable power range from 0.25 kW to 22.0 kW
- ▶ Optimised for continuous operation in 4 matching sizes
- ▶ Genuinely usable overload reserves of up to 200% of the rated power

Fast

- ▶ Comprehensive measuring methods for recording the actual electrical data as the basis for excellent control of the drive unit
- ▶ Integrated, precise and fast-acting current vector control for immediate adaptation to actual load conditions
- ▶ Integrated interface for connection of an incremental encoder to detect the actual motor speed (prerequisite for precise control)

Precise

- ▶ Integrated, precise, fast and completely autonomous positioning function (POSICON)
- ▶ Integrated interface for connection of an absolute encoder to detect the actual position

Adaptable

- ▶ Integrated DIP switches for basic configuration without modification of the software
- ▶ Comprehensive selection of plug connectors for control and power cable connections
- ▶ Easily accessible exchangeable data carrier (EEPROM) for simple exchange of parameter settings between identical devices
- ▶ Devices can also be supplied individually

Configurable

- ▶ Mounted on the geared motor
- ▶ Equipped with the necessary accessories (braking resistor, bus interface, encoders, etc.)
- ▶ Pre-parameterised for the specified drive application
- ▶ Equipped with the necessary system plug connectors

Environmentally friendly

- ▶ Low-loss use of energy
- ▶ Energy-saving function to match the power output to the actual demand in partial load operation
- ▶ Consideration of environmental protection even during manufacture (e.g. RoHS)

Standards and approvals

All devices of the entire series comply with the standards and directives listed below.

Frequency inverter - Connection unit

SK TI4-1-205-1 (-C-EX)

Versatile and sustainable

The frequency inverter with „servo genes“

CANopen

Standard encoder interfaces

The frequency inverters' speed control is extremely precise thanks to sophisticated and fast measuring methods and calculation algorithms in combination with integrated high-precision current vector control.

However, there are applications where precision of a thousandth of a motor revolution and very high dynamics (maximum acceleration, cyclic operation, synchronous rotation relative to other drive units) are needed. In such cases, precise feedback from the mechanical momentary values of the motor or the drive unit is required. This feedback is provided by **incremental encoders**, which are normally mounted on the motor shaft and provide information about its actual position. These values enable the motor to be precisely controlled by the frequency inverter so that even with large load fluctuations an asynchronous motor can be operated with a performance similar to that of a servo motor.

Absolute encoders round off the concept so that high-precision drive applications such as

- ▶ Synchronisation of multiple drive units
- ▶ Dynamic synchronisation of a drive unit to a different drive unit (flying saw)
- ▶ Relative positioning tasks (cyclical drives)
- ▶ Absolute positioning tasks (automatic warehouse equipment / high-bay storage, lifting equipment with defined positions)

are possible.

Each frequency inverter is equipped with a corresponding interface.

- ▶ HTL incremental encoder interface (connection via 2 digital inputs) - primarily for speed control
- ▶ CANopen absolute encoder interface (connection via system bus) - primarily for positioning

Available in all size

Modern automation systems

Power
(115 V / 230 V / 400 V)

AS-Interface
including 24 V supply SK 2xxE

Modern automation systems have a wide range of requirements, so that a suitable bus system and drive components must be selected in order to ensure efficient implementation.

For the lower field level, the AS-Interface is a cost-effective solution which enables the networking of binary sensors and actuators. With NORDAC *FLEX*, special versions which provide an appropriate solution by means of an **AS-Interface**, are available for this price-sensitive area.

The supply voltage (power) is connected separately via the corresponding terminals. Depending on the version of the device, the control voltage of the frequency inverter is generated either via an integrated power supply unit or is supplied separately via the yellow AS-Interface cable. This eliminates the need for an additional AUX cable (black). The type of addressing possible (standard or A/B slaves) also depends on the version of the device.

Device SK ...	220E/230E	225E/235E
Slave profile	S-7.A.	S-7.0.
Slave type	A/B-Slave	Standard
Control voltage	Internal power supply	Yellow AS-I cable
Inputs/Outputs	4/4	4/4
Configuration via DIP switch	●	●
Configuration via parameters	●	●

ATEX-compliant drive systems, zone 22 3D

Size 1-3 devices can be modified for operation in explosive atmospheres.

This allows the operation of the frequency inverter directly in a hazardous area (ATEX 22-3D). The advantages are obvious:

- ▶ Compact drive unit
- ▶ No complex protective devices
- ▶ No motor cables
- ▶ Optimum EMC
- ▶ Permissible characteristic curves 50 Hz / 87 Hz
- ▶ Control range up to 100 Hz or 3000 rpm

Depending on the area of application (conductive or non-conductive dust) the modification includes, among others, replacement of the transparent diagnostic caps with a version made of aluminium and glass.

It must be noted that operation of the device within the hazard area is only permitted with integrable modules (SK CU4 modules, internal brake resistors) or specially approved accessories (ATEX potentiometer „SK ATX-POT“).

There are exceptions for SK TU4 modules, which are described in detail in the manual for the device. Other accessories (e.g. external brake resistors, plug connectors) are not approved for use within a hazardous area.

Approval

- ▶ According to 2014/34/EU
- ▶ ATEX Zone 22 - 3D
 - ▶ Version for non-conducting dust: IP55
 - ▶ Version for conducting dust: IP66

Available in all size 1-3 devices

Configuration and monitoring

Integrated aids for safe operation

Commissioning with a screwdriver

Various basic functions can be simply set via easily accessible DIP switches so that commissioning is possible without parameterisation software. Even when an EEPROM is plugged in, the DIP switch settings have priority over the relevant parameters.

Plug-in EEPROM

The frequency inverter is equipped with two EEPROMs for saving the individual parameter settings of the device. One EEPROM is integrated into the device and another EEPROM can be plugged in and is easily accessible. All parameter settings are managed by the internal EEPROM. The data is mirrored to the external EEPROM. Because of the easy access, data sets can be exchanged between identical drive units via the plug-in EEPROM. Via an optional parameterisation adapter (SK EPG-3H) devices can be parameterised „in the laboratory“ so that only the plug-in EEPROM needs to be transferred between the system and the „laboratory“.

Jumpers for mains adaptation

It is possible to adapt the frequency inverter for operation in an IT network by plugging in a jumper. However, this adaptation has a negative effect on the emission of electromagnetic interference. Compliance with the specified degree of radio interference suppression can no longer be guaranteed in this case.

Status and diagnostic cockpit

Depending on the type of device, various aids for monitoring the device or for diagnostics in case of faults are located behind 3 transparent cover caps. In addition, there are further elements (e.g. DIP switches or similar) which are useful for screwdriver-assisted commissioning.

Example: SK 2x0E

SK 2x0E in Sizes 1-3

(Size 4 as for SK 2x5E)

1 Diagnostic interface, RS-232 and RS-485

RJ12 interface for connection of a diagnostic and parameterisation tool (e.g. PC with NORDCON software, ParameterBox). Analysis, diagnostics, parameterisation and monitoring of the drive unit via software is possible during commissioning or service.

2 DIP switches for analogue inputs

The integrated analogue inputs of the device can be configured to the signal form of setpoint values (current or voltage) via the DIP switches.

3 Status LED for frequency inverter and system bus

In addition to status and readiness indicators, the current overload level, warnings and error messages are indicated in coded form by the LEDs

SK 2x5E and SK 2x0E in Size 4

1 Diagnostic interface, RS-232 and RS-485

RJ12 interface for connection of a diagnostic and parameterisation tool (e.g. PC with NORDCON software, ParameterBox). Analysis, diagnostics, parameterisation and monitoring of the drive unit via software is possible during commissioning or service.

2 Status and diagnostic LEDs

In addition to the operating status of the system bus, various signal statuses (e.g. of the digital IOs) can be read out here.

3 Potentiometer and status LEDs

The two potentiometers are used for the fixed setting of various dynamic factors (setpoint frequency, frequency band, acceleration time). The two diagnostic LEDs indicate the operating statuses and error messages of the device or the AS-Interface (if present).

NORDAC FLEX frequency inverter

1~ 110 ... 120 V and 1/3~ 200 ... 240 V

Output frequency	0.0 ... 400.0 Hz	Protection class	IP55, optionally IP66, NEMA type1 (higher NEMA classifications on request)
Pulse frequency	3.0 ... 16.0 kHz	Regulation and control	Sensorless current vector control (ISD), linear V/f characteristic curve
Typical overload capacity	150 % for 60 s, 200 % for 3.5 s	Motor temperature monitoring	I ² t Motor PTC / bi-metal switch
Energy efficiency class	IE2	Leakage current	<40 mA for standard configuration of integrated line filter <20 mA for configuration for "operation on IT network"
Efficiency	> 95 %

We bring together what belongs together

The NORDAC *FLEX*

consists of 2 elements – the actual frequency inverter and a suitable connection unit. The connection unit contains all device-specific connection terminals and a space for the supplement of an optional SK CU4-... module (internal control terminal).

The NORDAC *FLEX* is usually directly mounted on a motor.

The NORDAC *FLEX* can be combined with motors from various power and efficiency classes. Depending on the motor with which the frequency inverter is combined, the mounting on the terminal box base of the motor may require an additional mounting adapter.

Adjustments for motor mounting

The terminal box fixations partially differ between the single motor sizes. It may therefore necessary for the device structure to use adapters.

To ensure the device's maximum IPxx protection class for the entire unit, all elements of the drive unit (e.g.

motor) must comply with the same protection class. NORDAC *FLEX* can also be combined with IE5+ motors from NORD. The frequency inverter output matches the motor power.

Varied installation possibilities

Motor Assembly

The frequency inverter can be mounted directly on the terminal box of the (geared) motor, thus forming a perfect unit consisting of the drive and the control technology. This motor-mounted format makes full use of its unbeatable advantages: compact overall dimensions of the drive unit, practically immediate readiness for use after connection to the mains supply thanks to the pre-configuration of the drive unit at the factory, optimum EMC due to short cable lengths - or elimination of a motor cable.

Wall mounting

As an alternative to motor mounting, the device can be mounted close to the motor with the aid of an optional wall mounting kit.

You can select from different versions depending on the prevalent ambient conditions.

1. Standard version SK TIE4-WMK-1-K (-2-K or -3)

Note: If the frequency inverter is wall mounted, the cooling air flow from the motor is not present. This can ultimately result in power restrictions (derating) for the frequency inverter.

2. Version with fan SK TIE4-WMK-L-1 (or -L-2)

This version differs from the standard version due to an extra fan. The fan ensures a continuous flow of cooling air over the frequency inverter. This avoids derating due to wall mounting.

As standard, Size 4 frequency inverters are equipped with fans. A corresponding wall mounting kit is therefore not necessary and is not available.

3. ATEX version SK TIE4-WMK-1-EX (up to -2-EX)

This version is functionally comparable to the standard version, however it is suitable for use in explosion hazard environments (ATEX Zone 22 3D).

Designation	Material No.	Frequency inverters ¹ for size FI

Brake resistors

Internal version

Internal braking resistors SK BRI4

Internal braking resistors are intended for applications in which slight or only sporadic and brief braking (e.g. continuous conveyor equipment, mixing equipment) is to be expected. In addition, they enable the use of the frequency inverter in very confined spaces or in an explosive atmosphere.

Internal brake resistors are intended for installation in the connection unit of the frequency inverter. The devices provide space for the integration of one brake resistor or a set of 2 brake resistors (SK 2x0E, size 4). For thermal reasons, the rated continuous output is limited to 25%. A respective overload protection can be configured via DIP switch.

Frequency inverter SK 2xxE ...	Resistor type	Material No.	Resistance [Ω]	Continuous output [W]	Power consumption ² [kW]	
1 ~ 115 V	0.25 ... 0.75 kW	SK BRI4-1-100-100	275 272 005	100	100 / 25 %	1,0

¹ Reduction of the continuous output of the braking resistor to 25% of the rated output

² Permissible max. once within 10 s

Braking resistors External version

External braking resistors SK BRE4

External braking resistors (IP67) are intended for applications in which longer (lifting equipment), frequent (cyclic operation) or intensive (highly dynamic positioning applications) braking is to be expected. They are mounted directly on the frequency inverter. Typically, they can develop high surface temperatures (>70 °C), which exclude their use in an explosive atmosphere.

Note

The braking resistors listed here are designed for typical applications with occasional braking. In case of doubt or for applications with higher braking power (lifting equipment), we recommend specific planning of the necessary brake resistor. Please contact the NORD DRIVE-SYSTEMS Group directly..

Frequency inverter for decentralised applications

NORDAC *BASE* SK 180E series

For standard requirements NORDAC *BASE*, SK 180E series

NORDAC *BASE*

The advantages of using a frequency inverter to control an electric motor are obvious. Modern frequency inverters offer the typical basic functions such as speed control and communication with control units as well as versions which, for example, can automatically provide positioning and safety functions.

However, many applications do not fully utilise the immense scope of functions of modern frequency inverters. To fill the gap which has resulted between simple motor starters and full featured frequency inverters, NORD has developed a compact model. It concentrates on the essential functions for pumps and conveyor technology (PI / speed control, energy saving, communication with peripherals) and results in significant savings, in both purchase and performance

- ▶ All common drive functions
- ▶ Leakage current <16 mA
- ▶ Consistent parameter structure
- ▶ Stand-alone operation (integrated 24 V power supply)
- ▶ 3 digital inputs and 2 digital outputs
- ▶ 2 analogue inputs (can optionally be used for current or voltage setpoints, or can also be configured as digital inputs e.g. for sensors)
- ▶ 4 parameter sets which can be switched online
- ▶ Process controller / PI controller
- ▶ Energy saving function: "Automatic flux optimisation"

Optional

- ▶ AS-Interface on board
- ▶ Common bus modules
- ▶ I/O modules
- ▶ System plug connectors (e.g. Harting HAN 10E)
- ▶ Variant for ATEX Zone 22 - 3D
- ▶ Various control options (switches, potentiometer or ParameterBoxes)

Energy-saving functions

- ▶ Automatic flux optimisation for pump/fan applications
- ▶ Large energy savings
- ▶ Simple setting via parameters

EMC line filter

Category C1 (Class B)

- ▶ All 230 V / 400 V devices have an integrated line filter.
- ▶ Also ideal for applications in a domestic environment, due to compliance with Category C1 (for motor-mounting), or Category C2 (for wall mounting with motor cable up to 5 m long)
- ▶ Suitable for personal protection due to low leakage current (< 16 mA) for operation with universal fault current FI circuit breakers

Process controller, PI controller

- ▶ All NORDAC *BASE* devices feature integrated analogue inputs.
- ▶ P and I components can be set separately
- ▶ High precision regulation.

Versatile and sustainable For modern automation systems

Modern automation systems have a wide range of requirements, so that a suitable bus system and drive components must be selected in order to ensure efficient implementation.

For the lower field level, the **AS-Interface** is a cost-effective solution which enables the networking of binary sensors and actuators. With **NORDAC BASE**, a version which provides an appropriate solution by means of an on-board AS-Interface, is available for this price-sensitive area.

The supply voltage (power) is connected separately via the corresponding terminals. An integrated mains unit generates the control voltage for the frequency inverter. This eliminates the need for an additional AUX cable (black).

Type code

Frequency inverter

SK 180E-370-323-B (-C) (xxx)

(...) Options, only implemented if required.

ATEX-compliant drive systems, zone 22 3D

The NORDAC *BASE* can be modified for operation in explosive environments.

This allows the operation of the frequency inverter directly in a hazardous area (ATEX 22-3D). The advantages are obvious:

- ▶ Compact drive unit
- ▶ No complex protective devices
- ▶ No motor cables
- ▶ Optimum EMC
- ▶ Permissible characteristic curves 50 Hz / 87 Hz
- ▶ Control range up to 100 Hz or 3000 rpm

Depending on the area of application (conductive or non-conductive dust) the modification also includes the replacement of the transparent diagnostic caps with a version made of aluminium and glass.

It must be noted that operation of the device within the hazardous area is only permitted with integrable modules (SK CU4 modules, internal braking resistors) or specially approved accessories (ATEX potentiometer „SK ATX-POT“).

There are exceptions for SK TU4 modules, which are described in detail in the manual for the device. Other accessories (e.g. external brake resistors, plug connectors) are not approved for use within a hazardous area.

Approval

- ▶ According to 2014/34/EU
- ▶ ATEX Zone 22 - 3D
 - ▶ Version for non-conducting dust: IP55
 - ▶ Version for conducting dust: IP66

Status and diagnostic cockpit

The RJ12 interface for connection of a diagnostic and parameterisation tool (e.g. PC with NORD CON software, ParameterBox) is located behind the transparent cover cap. Analysis, diagnostics, parameterisation and monitoring of the drive unit via software is possible during commissioning or service. In addition to status and readiness indicators, the current overload level, warnings and error messages are indicated in coded form by the LEDs.

Varied installation possibilities

Motor Assembly

The frequency inverter can be mounted directly on the terminal box of the (geared) motor, thus forming a perfect unit consisting of the drive and the control technology. This motor-mounted format makes full use of its unbeatable advantages: compact overall dimensions of the drive unit, practically immediate readiness for use after connection to the mains supply thanks to the pre-configuration of the drive unit at the factory, optimum EMC due to short cable lengths - or elimination of a motor cable.

Wall mounting

As an alternative to motor mounting, the device can be mounted close to the motor with the aid of an optional wall mounting kit.

You can select from different versions depending on the prevalent ambient conditions.

1. Standard version SK TIE4-WMK-1-K

Note: If the frequency inverter is wall mounted, the cooling air flow from the motor is not present. This can ultimately result in power restrictions (derating) for the frequency inverter.

2. ATEX version SK TIE4-WMK-1-EX

This version is functionally comparable to the standard version, however it is suitable for use in explosion hazard environments (ATEX Zone 22 3D).

Designation	Material No.	Frequency inverters ¹ for size FI
SK TIE4-WMK-1-K	275 274 004	BG 1, 2
SK TIE4-WMK-1-EX	275 175 053	BG 1, 2
SK TIE4-WMK-TU ²	275 274 002	Typ: SK TU4-

¹ Mounting of the WMK underneath the motor starter

² Mounting of the WMK on the connection unit of the technology unit

Motor-mounted or wall-mounted frequency inverters

Designation	Material	Integrated fan	Achievable protection class	Weight [kg]	(Overall) dimensions L x W x H [mm]	Remarks

Technology unit on NORDAC BASE or wall mounting

Brake resistors (only for Size 2 devices) internal versions

Internal braking resistors SK BRI4

Internal brake resistors are intended for applications in which slight or only sporadic and brief braking (e.g. continuous conveyor equipment, mixing equipment) is to be expected. In addition, they enable the use of the frequency inverter in very confined spaces or in an explosive atmosphere.

Internal brake resistors are intended for installation in the connection unit of the frequency inverter. The units offer space for implementing one brake resistor each. For thermal reasons, the rated continuous output is limited to 25%.

Equipment with a brake resistor has to be specified additionally during ordering. Retrofitting is not possible.

Frequency inverters SK 180E / SK190E	Resistor type	Material No.	Resistance [Ω]	Continuous output ¹ [W]	Power consumption ² [kW]
1/3~ 230 V 0.75 ... 1.5 kW	SK BRI4-1-200-100	275 272 008	200	100 / 25 %	1.0
3~ 400 V 1.5 ... 2.2 kW	SK BRI4-1-400-100	275 272 012	400	100 / 25 %	1.0

¹ Reduction of the continuous output of the braking resistor to 25% of the rated output

² Permissible max. once within 10 s

Brake resistors (ONLY FOR SIZE 2 DEVICES) external versions

External braking resistors SK BRE4

External braking resistors (IP67) are intended for applications in which longer (lifting equipment), frequent (cyclic operation) or intensive (highly dynamic positioning applications) braking is to be expected. They are mounted directly on the frequency inverter. Typically, they can develop high surface temperatures (>70 °C), which exclude their use in an explosive atmosphere.

Note

The brake resistors listed here are designed for typical applications with occasional braking. In case of doubt or for applications with higher braking power (lifting equipment), we recommend targeted planning of the necessary brake resistor. Please contact the NORD DRIVESYSTEMS Group directly.

Frequency inverters SK 180E / SK190E	Resistor type Material No.	Resistance [Ω]	Continuous output [W]	Power consumption ¹ [kW]	(Overall) dimensions L x W x H [mm]
1/3~ 230V 0.75 ... 1.5 kW	SK BRE4-1-100-100 275 273 005	100	100	2.2	150 x 61 x 178
	Alternatively: SK BRE4-2-100-200 275 273 105	100	200	4.4	255 x 61 x 178
3~ 400V 1.5 ... 2.2 kW	SK BRE4-1-200-100 275 273 008	200	100	2.2	150 x 61 x 178
	Alternatively: SK BRE4-2-200-200 275 273 108	200	200	4.4	255 x 61 x 178

¹ Permissible max. once within 120 s

Motor starter decentralised applications

NORDAC *START* SK 135E series

Switch on and start working!

NORDAC *START*, SK 135E series

[NORDAC *START*](#)

NORDAC *START*

Mains-powered electric motors

are very widespread. They require low installation and commissioning effort.

On the other hand, disadvantages include the high power consumption for the starting torque (up to 7 times the rated current for the motor), excessive mechanical loads on the gear unit and the system, as well as the frequently uncontrolled starting and stopping behaviour. Electronic starters are a simple and very economical solution to this problem. However, NORD devices are far more than simple current limiting “starters” for electric motors.

NORDAC *START*

combines the 3 functions of a typical “electronic motor starter”, which are known under the terms starter, reversing starter and soft starter.

The NORDAC *START* provides comprehensive monitoring and protective functions (mains/motor/self-monitoring) and also eliminates the need for a motor protection switch. It enables individual adaptations to the operating characteristics (starting / shut-down behaviour) and provides optional communication interfaces. A special feature is the variable mounting of the device. In confined spaces it has the advantage that the compact device can be easily used for operation close to the motor.

Many applications,

including those in material handling, require electronic starting and stopping of the drive units. The NORDAC *START* is ideally suited for this. Its versatility makes both motor starting functions and soft starting or reversing mode possible. Extensive monitoring functions provide protection from overheating, for example. Due to the I²t triggering characteristic, a motor protection switch is not required. Through the integrated line filter, the NORDAC *START*, complies with even the most stringent EMC requirements when mounted on the motor.

- ▶ Configuration via DIP switches and potentiometers
- ▶ Integrated electronic brake rectifier
- ▶ Choice of different shut-down modes
- ▶ Leakage current <20 mA
- ▶ Consistent parameter structure
- ▶ 2 digital inputs and outputs

Optional

- ▶ Bus interface on board
 - ▶ AS-Interface (implemented as SK 175E-ASI)
 - ▶ PROFIBUS® DP (implemented as SK 175E-PBR)
- ▶ System plug connectors (e.g. Harting HAN 10E)
- ▶ Variant for ATEX Zone 22 - 3D
- ▶ Various control options (switches, ParameterBox)
- ▶ 24V mains unit

Variable operating characteristics

- ▶ Pre-defined shut-down modes
- ▶ Variable starting and shut-down ramps
- ▶ Boost function

EMC Line Filter Class B

- ▶ Integrated line filter
- ▶ Also ideal for applications in a domestic environment, due to compliance with Class B (for motor-mounting or motor cables up to 10 m), or Class A, for wall mounting with motor cables up to 100 m long
- ▶ Suitable for personal protection due to low leakage current (< 20 mA) for operation with universal fault current FI circuit breakers

Commissioning

- ▶ Commissioning via integrated DIP switches and potentiometer
- ▶ No programming skills required

Standards and approvals

Versatile and sustainable Communication and more

Modern automation systems have a wide range of requirements, so that a suitable bus system and drive components must be selected in order to ensure efficient implementation.

AS-Interface

For the lower field level, the AS-Interface is a cost-effective solution which enables the networking of binary sensors and actuators. With *NORDAC START*, special versions which provide an appropriate solution by means of an AS-Interface, are available for this price-sensitive area.

The supply voltage (power) is connected separately via the corresponding terminals. Depending on the device configuration (with jumpers), the control voltage of the motor starter is supplied via the yellow AS-Interface cable, or separately via the black (AUX) cable.

Available in all SK 175E ... ASI devices

Power
(230 V / 400 V)

AS-Interface
including 24 V supply
(configurable)

PROFIBUS DP®

This bus system allows for cyclic exchange of 4 control or 4 status bits via a process data object (with up to 12 Mbps). Addressing is performed via a rotary encoding switch. The PROFIBUS® terminator can be enabled with a jumper. Connection is possible with terminal strips or M12 plug connectors.

Available in all SK 175E ... ASI devices

	SK 135E 0.25 - 7.5 kW	SK 175E - ASI 0.25 - 7.5 kW	SK 175E - PBR 0.25 - 7.5 kW
Control terminals	Number of digital inputs (DIN)	2	2 (+2 sensor inputs for Bus)
	Number of digital outputs (DOUT)	2	2
	Brake control	●	●
	Temperature sensor (PTC)	●	●
Communication	RS-232 RJ12	●	●
	AS-I terminal connection	○	●
	PROFIBUS DP® terminal connection	○	●

Note

Control terminals can be added with optional modules (IOs, device protection).

- Available as standard
- Not available

Configuration and monitoring

Integrated aids for safe operation

Commissioning with a screwdriver

Commissioning of the device is basically possible without parameter adaptation, i.e. without programming aids. For this purpose, DIP switches and several 10 step potentiometers are available. These are accessible via the diagnostic opening in the centre or by removing the cover. The status LEDs of the device are also located behind this diagnostic opening.

The following parameters can be adjusted in this way:

- ▶ Rated motor current
- ▶ Locking time
- ▶ Start-up torque
- ▶ Start-up and run-down time
- ▶ Switch-off mode
- ▶ Phase sequence detection
- ▶ Automatic start
- ▶ PROFIBUS DP® addressing (only SK 175E-...-PBR)

Jumpers for configuration

The communication interface can be configured by changing the jumper position.

- ▶ SK 175E-...-ASI: Communication mode
 - ▶ ASI (supply for interface and device via yellow cable) or
 - ▶ AUX (supply for interface via yellow cable and for device via black cable)
- ▶ SK 175E-...-PBR: Interface terminator

Available in all SK 175E devices

Status and diagnostic cockpit

Depending on the type of device, various aids for monitoring the device or for diagnosis in case of faults are located behind two transparent cover caps. In addition, there are further elements (e.g. potentiometers or similar) which are useful for “screwdriver-assisted commissioning”

1 Status LEDs and potentiometers

In addition to status and readiness indicators, the actual overload level, warnings and error messages of the integrated bus system (SK 175E) are indicated in coded form by the LEDs.

Operational settings of the motor starter can be set with the potentiometers.

2 Diagnostic interface, RS-232

RJ12 interface for connection of a diagnostic and parameterisation tool (e.g. PC with NORDCON software, ParameterBox1). Analysis, diagnostics, parameterisation and monitoring of the drive unit via software is possible during commissioning or service.

¹ Use of a parameterisation unit also requires the use of a signal converter. (SK TIE4-RS-485-RS-232, material no. 275 274 603)

Varied installation possibilities

Motor Assembly

The motor starter can be mounted directly on the terminal box base of the (geared) motor, thus forming a perfect unit consisting of the drive and the control technology. This motor-mounted format makes full use of its unbeatable advantages: compact overall dimensions of the drive unit, practically immediate readiness for use after connection to the mains supply thanks to the pre-configuration of the drive unit at the factory, optimum EMC due to short cable lengths - or elimination of a motor cable.

Wall mounting

As an alternative to motor mounting, the device can be mounted close to the motor with the aid of an optional wall mounting kit.

You can select from different versions depending on the prevalent ambient conditions.

1. Standard version SK TIE4-WMK-1-K

2. ATEX version SK TIE4-WMK-1-EX

This version is functionally comparable to the standard version, however it is suitable for use in explosion hazard environments (ATEX Zone 22 3D).

Designation	Material No.	Frequency inverters ¹ for size FI
SK TIE4-WMK-1-K	275 274 004	BG 1
SK TIE4-WMK-2-K	275 274 015	BG 2

Perfect connections with system plug connectors

The use of optionally available plug connectors for power and control connections not only makes it possible to replace the drive unit with almost no loss of time in case of servicing, but also minimises the danger of installation errors when connecting the device. This enables the perfect construction of an energy or communication bus. Typical plug connector versions are summarised below.

Plug connectors for power connections

Plug connectors from various manufacturers are available for the motor or mains connection for rated currents of up to 20A.

Type	Data	Designation	Material No.	NORDAC

Plug connectors for control connections

Various M12 round plug connectors are available as flanged plugs or flanged sockets. The plug connectors are intended for installation in an M16 screw fitting on the device and can be oriented in any direction. The protection class (IP67) of the plug connector only applies in the screwed state. The cover caps correspond to the colour version as does the plastic body of the plug connector. Expansion and reducer adapters are available for installation in an M12 or M20 screw fitting.

Not to be underestimated – the correct connection method

With the NORDAC *LINK*, *FLEX*, *BASE* and *START* frequency inverters and motor starters, the NORD DRIVESYSTEMS Group provides the right product for motor control for all decentralised drive technology applications. The advantages, such as short motor cables, improved EMC and installation without control cabinets are obvious.

Connection of the decentralised components (motor and electronics) is made either with a permanent connection with cable glands¹ or can be in the form of plug connectors. However, the full advantages of decentralised drive technology are only achieved with the selection of plug-in connectors.

- ▶ Quick and simple electrical connection
- ▶ Minimisation of connection errors
- ▶ Minimum installation effort for installation, maintenance and servicing
- ▶ Reduced downtime in case of replacement

NORD supplies an extensive range of connection and control cables.

- ▶ Depending on the version, connecting cables include power connection cables (mains and motor) and if necessary cables for thermistors as well as 24 V DC control voltage.
- ▶ Control cables are exclusively used for transmitting control signals (encoder, bus, IO signals).

Connection and control cables are supplied pre-assembled. They are available in various lengths and can optionally be provided with open ends or plug connectors. Typically, all cables² are shielded.

¹ Not for NORDAC *LINK*, NORDAC *ON*

² Except for mains connection/daisy chain cables

Designation of pre-assembled cables

Pre-assembled cables

- ▶ Cables for motor and frequency inverter connection
- ▶ Mains connection and signal cables
- ▶ Customised plug connectors and cable lengths

Mains cables / Daisy chain cables

Product overview – Mains cable

The following unshielded mains cables are available. A simple plug-in connection for frequency inverters can be achieved with the HQ4 variant. With a further variant (HQ42) a 24 V DC supply can also be implemented.

Designation	24 V DC supply	Certification	Part number for length [m]		
			1.5	3	5
